

WATERTIGHT EXPANSION JOINT SYSTEMS

FOR BITUMINOUS LAYERS, COATINGS, LIQUID SEALANTS,
AND INSTALLATION IN CONCRETE: PERMANENT WATERTIGHT,
TRAFFICABLE AND ROBUST.

YOU FIRST.

MIGUA is one of Europe's leading experts in the design, manufacture and installation of expansion joint systems. MIGUA expansion joint systems serve to cover, close and seal expansion joints. Our products satisfy the most rigorous standards in quality and safety and are widely used in large-scale construction projects such as airports, train stations, industrial plants, parking structures, shopping centres and hospitals. Every day, our experienced team do their utmost to make your building project successful. We are not satisfied until you are satisfied. Because our guiding principle is:

MIGUA – you first.

Over 600 products for one purpose: Yours.

With five brands and over 600 proven expansion joint systems, we've got the diverse structural needs of today's construction projects covered. We confront problems such as heavy traffic loads and meet exacting standards in water resistance or hygiene. Floors, walls or roofs, MIGUA offers the perfect solution for any surface. Products of the highest quality are fundamental to our business; yet our ultimate priority is always customer satisfaction. We offer you a wide range of services to make your building project successful: Starting with competent advice, followed by technical application support on site up to the complete installation service. And since we know that the requirements for expansion joints are just as individual as the buildings themselves, we gladly develop your own very special joint cover system solution based on your requirements. And that is what we call our MIGUA 360° Service.

WITH MIGUTAN, MIGUA OFFERS A COMPREHENSIVE RANGE OF **WATERTIGHT EXPANSION JOINT CONSTRUCTIONS FOR BITUMINOUS SEALS, COATING SYSTEMS, LIQUID SEALS AND INSTALLATION IN CONCRETE.**

For a wide range of buildings – in both the public-communal sector and the private sector – watertight expansion joint constructions are of key significance for the preservation of the structure: Parking decks, multi-storey and underground car parks, pedestrian bridges, exhibition halls, gastronomy, swimming pools, clinics, sports facilities and stadiums must be protected against the ingress of water in key stages of construction.

Well-considered, extremely durable, sealed and robust expansion joint constructions are required. The variety of physical construction requirements also makes individual constructive solutions necessary, in part with very different executions.

One thing that all MIGUTAN expansion joint constructions have in common is the special technology which enables exchangeable centre seals and seal at the level of the upper edge of the finished floor.

In the construction branch, MIGUA is considered one of the technology leaders in Europe when it comes to the particularly demanding watertight expansion joint constructions. MIGUTAN offers planners and architects a tried and tested series of products with an especially wide range of applications. Enhanced by a comprehensive, well-thought-out system of expansion joint cover connections and intersections, MIGUTAN offers a safe solution for every application.

Test certificates

After extensive testing, MIGUA was awarded an AbP (general building authority test certificate) for our watertight expansion joint covers. This AbP covers the entire MIGUTAN programme including all joint cover heights and -widths as well as all connections to bituminous sealing layer, coatings and liquid plastics.

This makes MIGUA the first manufacturer of expansion joint covers to subject its complete range of watertight expansion joint covers through these tests and has been granted an AbP (exception: FPL, FPSG). According to German building law, the AbP is proof of usability and is mandatory for all buildings in the legal area of the state building regulations. This AbP is therefore the only possibility to meet the requirements stipulated in the call for bids with standardised tests.

The AbP is available for download on our website migua.com

In addition, the proof of the direct traversability (load-bearing capacity) is attested a test report by the STUVA (Studiengesellschaft for traffic installations).

Specifications regarding the load capacity

Picto-gramm					
Meaning	Pedestrians	Private cars	Lorries DIN 1072	Forklift trucks DIN 1055	Solid plastic tyres

The load specifications of air-filled apply to a wheel contact patch of 200 x 200 mm.

Note regarding installation

Assembly and installation instructions are available on request. Please contact us. Alternatively, all information is ready for download from www.migua.com.

When installing the MIGUTAN joint constructions in mastic asphalt pavements, please request our technical advice.

Standard mounting list

A detailed list of standard mountings is available on our website.

Fixture/dowelling

For the fixture of expansion joint heights 25mm, 35 mm and 45 mm in conjunction with long AAS sheets and fleece laminated sheets (XA sheets), counter-sunk screws are to be used.

Expansion joint cover anchoring using anchor rods or loop anchors

To secure to filigree plates, the expansion joint covers may be supplied with adjustable brackets fitted at the factory.

The connection of the individual lengths on the construction site is carried out using the pins installed at the factory. This ensures the height and side transitions of the individual joint lengths are the same.

For weight reasons and due to the improved handling, we recommend axial separation when assembling MIGUTAN expansion joint covers with loop anchors.

To securely fix the expansion joint construction, the anchoring rods or loops must be welded with the reinforcement. In the upper section, alongside the stainless steel caps, a gap must be left on both sides as connection joint (approximately 10 x 20 mm) between the joint cover and the concrete. This must subsequently be filled with a suitable PU sealant to ensure it is watertight (3-flank adhesion). These connection joints can be made economically and clean using the AAP 50/20 connection joint recess profile.

SYSTEM DESCRIPTION MIGUTAN EXPANSION JOINT CONSTRUCTIONS WITH EXCHANGEABLE CENTRE SEAL

FOR SEALING AGAINST NON-PRESSURIZED WATER

Areas of application

MIGUTAN expansion joint covers have been used for more than 40 years for waterproofing in car parks, parking decks (exposed to weather), underground car parks, swimming pools, canteen kitchens, footbridges, airports etc. A large number of reference projects can be verified.

Special features

Aluminium expansion joint covers with grooved aluminium brackets, elastic centre seal and, on both sides, long, short or laminated sealing connection sheet (AAS sheets) of MIGUFLEX quality, wear-proof, weatherproof, resistant to de-icing salt, and good resistance to waste water (hydrogen sulphide, microbes, bacteria) The AAS sheets can be used with hot bitumen.

To ensure watertightness, the watertight Migutan expansion joint covers must be connected to the on-site waterproofing in accordance with DIN 18531, 18532, 18533 or to the waterproofing surface protection system. The double-sided connection sheets of the expansion joint covers are available for coating (short AAS sheets), bituminous layer (long AAS sheets, 300 mm long) as well as liquid sealings, mineral or bituminous liquid membranes/waterproofing slurry (XA sheets = Fibre fabric bonded sheets). The special design of the of the respective connecting sheets ensures the best possible bonding with the adjacent surface waterproofing.

Solid stainless steel caps Solid stainless steel caps are adapted to the requirements of the usage and are made of high-quality material 1.4301. Stainless steel 1.4571 or other material qualities are available upon request.

Screwing the stainless steel caps (Ni caps) to the profiles with a defined torque ensures that the sealing inserts are evenly compressed with the connecting sheets, thus guaranteeing permanent watertightness (see also sketch of the expansion joint cover set-up structure on page 7). For reasons of slip resistance, the surface of the Ni caps is additionally structured.

Exchangeable centre seal: Elastic, weather-proof, petrol, oil and de-icing salt resistant, watertight weldable centre seal with double-web to ensure two-fold security against ingress of water.

The centre seal can be exchanged at any time, even when installed, without damaging the surface.

Absolutely no ingress of damp or de-icing salt through the centre seal at the level of the upper edge of the finished floor. Therefore, the expansion joints remain dry within the joint.

Full sealing elements across the entire expansion joint course, ensuring 100% watertight seal.

Fully leveled connection of the joint covers by means of connection pins or by sliding the fixing legs into each other. Factory-mounted spacer brackets ensure optimally adjusted joint covers - for economical installation and functionally reliable positioning of the joint cover construction. Factory-made pre-settings of the joint covers are available upon request - thus maximising the one-sided movement absorption.

Fire protection: The products FP 80 NI, FP 90 NI, FPG 90 NI, FP 110 NI, FPG 80, FPG 110 and FP 130 have been subjected to comprehensive fire testing at MPA NRW (Material testing institute of Northrhine-Westfalia, Germany). These tests were passed in accordance with the test certificate and test report number 230007088. In accordance with EN 13501-1, all products are classified in accordance with Bfl-s1 (flame-resistant floorings, do not burn/drip). The FP 155 was newly classified with Bfl-s2.

Intersections and connections can be made watertight even for the most complicated of expansion joints, too. We guarantee joint cover accuracy thanks to on-site measuring (factory prefabrication including all intersections, transitions and connections). Joints are correct in height, thus ensuring ongoing stability due to factory-prepared couplings in metal construction.

Suitability in accordance with German law of water protection

WHG § 19: For applications to be executed in accordance with WHG § 19, individual solutions are available. Please contact us, if required.

Recommendations for application

Stainless steel cover caps: Re-tighten all fastening screws of the stainless steel cover caps by means of a torque wrench (7 Nm) after approx 14 days.

Mastic asphalt: When using in mastic asphalt, joint covers in 25 mm height should be used only as end profile in the wall area (upright joint) due to their little overlap.

Coatings: in case you plan to use Migutan expansion joint covers with short sheets on open decks and with a joint cover height of 25 mm, kindly ask for our technical advice.

Minimum expansion joint widths: Due to the shape of the centre seal, minimum expansion joint widths are to be adhered to for the following expansion joint covers:

- 50 mm for FP 110/25 NI
- 75 mm for FP 130/25 NI and FP 130/35 NI
- 95 mm for FP 155/... with joint heights of less than 80 mm

Cover plates: When using expansion joint covers with cover plates, there is no absorption of settlement movements.

MIGUTAN in the swimming pool sector: In case MIGUTAN expansion joint constructions are used in swimming pool areas, the required chloride resistance call for a higher quality stainless steel alloy that has to be pickled (stained). Therefore, please mention this area of use specifically for tenders and inquiries!

Increased hygienic requirements: For use with increased hygienic hygienic requirements in e.g. swimming pools, hospitals or retirement homes, hygienically safe, even movement inserts of the types FPG 80, FPG 90 and FPG 110 are available. This system is physiologically flawless, especially in combination with the sealing stainless steel caps.

THE SYSTEM EXPANSION JOINT CONSTRUCTIONS

Applies similarly to MIGUTAN long sheets, short sheets, XA and BNI.

Unique construction with the feature "visible surface = sealing surface"

No water penetration into the joint construction

Replaceable movement insert independent of the connecting sheets

All parts exposed to substances made of 1.4301 or better

- 1 = Expansion joint substructure with supports on both sides
- 2 = MIGUFLEX sealing insert to accommodate the planned joint movement
- 3 = Connection sheet, design as short sheets, long sheets, XA (here XA)
- 4 = Stainless steel cover caps
- 5 = Stainless steel cross-slotted screws with nylon seal for screwing with torque.
Compresses nos 2 and 3.
- 6 = Installation distance gauge (spacer) to be removed after installation
- 7 = Mortar (for this type of expansion joint substructure)
- 8 = pressure-resistant and shrinkage-free mortar (e.g. epoxy resin or PCC mortar)

MIGUARCHITECT.COM THE MODULAR PLANNING SYSTEM IN WEB PAGE FORMAT

With the website miguarchitect.com, MIGUA now offers an innovative work aid especially for architects and planners. This bespoke website was developed in the form of a working tool that contains information relevant only to planning. In addition

to tender texts and BIM files, the site also offers cleverly prepared basic know-how on the subject of planning with joints.

Miguarchitect.com was recently awarded the German Innovation Award 2019.

EFFICIENT PLANNING OF JOINTS WITH BIM

MIGUA is the first expansion joint cover manufacturer in Germany to support architects and planners in the efficient planning of joints using BIM objects. And that involves everything from the early design phase to the concrete execution.

This means that even in the early planning phase (service phase 3), when hardly any exact information is available about the joint cover required in the future - such as joint width, required movement absorption and load - initial planning

can be carried out very easily with a basic file, the so-called MIGUA BIM Basic. Once detailed requirements for the expansion joint cover are known (service phase 5), the planner can complete his work with the concrete BIM object without any additional effort.

At present, BIM objects for the watertight (MIGUTAN) and full metal expansion joint cover systems (MIGUTRANS) are already available - Details regarding other expansion joint cover systems will follow shortly.

JOINT WIDTH

Please find your expansion joint cover according to the required joint width here.

Width	Expansion joint cover

The Migutan expansion joint covers are sorted in the catalogue according to the type of waterproofing (bituminous waterproofing, coating, liquid waterproofing)

Joint covers with specific widths and movements can be manufactured on request, but are not shown in this catalogue.

EXPANSION JOINTS ACCORDING TO AREAS OF APPLICATION

Expansion joints for bituminous seals (long AAS sheets)

Characteristic for these products are the long AAS sheets for the best-possible adhesion connection to the area seal. Upper seal insert, non-slip Stainless steels caps and extremely durable aluminium brackets are additional characteristic properties of our MIGUTAN systems.

Expansion joints for coating systems (short AAS sheets)

Short Ass sheets ensure perfect watertight in connection with a surface protection system. This product category is also characterised by upper seal inserts, non-slip and structured stainless steel caps and extremely durable aluminium brackets. Systems with clip-open stainless steel protection cap (FPL) are available for particularly simple assembly.

Expansion joints for alternative seals (MIGUTRIX sheets – XA)

With this innovative MIGUA technology for liquid seals, fleece concealed AAS sheets ensure optimum attachment to a surface seal located under tiles. In conjunction with 3 different smooth seal inserts for hygienic requirements, anti-bacterial and physiologically safe. Particularly well-suited to swimming pool use in conjunction with special caps.

Expansion joints for installation in concrete (Anchor rods/loop anchors)

Expansion joint constructions with rod or loop anchors for particularly strong and flush installation in concrete ceilings with coatings. Sliding rod or loop anchors for variable welding options with reinforcing steel enable the greatest of flexibility and simple assembly. Suitable for a wide variety of loads thanks to the use of rod or loop anchors.

* FP 155/90 B NI: Bfl, s2
Sealing against nonpressurized water.
Distance of anchor loops ≤ 340 mm

FPL 85/75 B NI

FOR FLOORS WITH COATING SYSTEMS (SHORT AAS SHEETS)

MIGUTAN

WATERTIGHT EXPANSION JOINT SOLUTIONS

- 1 Central insert on top surface**
Visual inspection and replacement without disrupting the surface
- 2 Stainless steel clip-on-cappings, made of spring steel**
Easy and cost saving assembly
- 100% watertight**
In connection with a coating system and connection joint
- 3 MultiHole mounting brackets**
for secure fixing
- 4 Connection joint with connection joint filler cover AAP 110/23**
Proper and economical connection of the coating system

Expansion joint cover	Joint width max. $b_f \text{ max}$ [mm]	Total movement Δb_f [mm]	Visible width b_s [mm]	Joint width total b_t [mm]	Joint height h [mm]	Load bearing capacity [kN]	Load bearing capacity [kN]	Load bearing capacity [kN]	Load bearing capacity solid plastic tyres [kg/mm]
FPL 85/75 B NI	40	40 (±20)	85		75	35	300	70	

Sealing against nonpressurized water.
Distance of anchor rods to each other ≤ 170 mm

Structural stainless steel cover plate with appealing visual appearance

good skid resistance acc. to official test certificate

Surface for special requirements

Caroplan, Oval-Matt, Sand, Cross hatch

Mounting brackets are made of high strength aluminium

High loads without any risk of rust

Massive stainless steel caps

Absolute tightness by maximum contact pressure

Expansion joint cover	Joint width max. $b_f \text{ max}$ [mm]	Total movement Δb_f [mm]

For widths and heights as well as load capacity of the expansion joint cover, please refer to the corresponding technical data sheets of the very joint.

Available in different, officially tested anti-slip categories.

FP .../... APG + AP800

MIGUTAN WITH LOAD-TRANSFERRING COVER PLATES

MIGUTAN

WATERTIGHT EXPANSION JOINT SOLUTIONS

Description

Solid stainless steel cover plates for various loads in different thicknesses

Material

Stainless alloy 1.4301 Legierung, 1.4571 available on demand.

Surfaces

Available with various anti-slip surfaces on demand

Design

Chamfered APG cover plates available on demand starting from a thickness of 4 mm

Cover plate	FP(G) 80	FP(G) 90	FP(G) 110	FP130	FP155
APG 3 mm	X	X	X	X	X
APG 4 mm	X	X	X	X	X
APG 5 mm	X	X	X	X	X
AP800 2,5 mm		X			
APS 3 mm	X	X	X		
APS 4 mm	X	X	X		
APS 5 mm	X	X	X		

All APS cover plates for MIGUTAN FP 80 to FP 110 available in 4, 5 and 6 mm thickness (movement capability ± 10 mm).

DIFFERENT DESIGN VERSIONS

OF THE SUPPORTING PROFILES OF THE MIGUTAN EXPANSION JOINT COVER SYSTEM

SYSTEM STRUCTURE

MIGUTAN expansion joint covers

- 1 = Aluminium sub-structure
- 2 = Installation spacer
- 3 = MIGUFLEX-AAS sheet
- 4 = MIGUFLEX seal insert
- 5 = Stainless steel cover caps
- 6 = Stainless steel cross-headed screws
- 7 = Nylon seal
- 8 = Strip
- 9 = Load-bearing surface
- 10 = Pressure-bearing and shrinkage-free cement (e.g. epoxy resin or PCC cement)
- 11 = Connection joint cut-out expansion joint cover AAP

The represented intersections A–Z show a selection of the intersections that are possible. We are able to offer all kinds of intersections and connections, and even make the most complicated joint watertight.

STANDARD INTERSECTIONS

Angle, flat short AAS sheets

T-piece long AAS sheets

Crosspiece short AAS sheets

Upturn short AAS sheets

Upturn long AAS sheets

Slope end point

SUPPORTS WALL CONNECTIONS WITH SHORT AAS SHEETS FOR FLOORING AREAS WITH COATINGS

E 4 version

in conjunction with the expansion joint covers:

- FP(G) 80 NI
- FP(G) 90 NI
- FP(G) 110 NI
- FP 130 NI
- FP 155 NI

FP 90/25 NI E 4

Column skirt wall connection version E 2 or E 3

Important when using versions E2 and E3:

If the joint is located immediately next to a column or wall, at the beginning and end, two flat brackets are required as intersections (see drawing). This ensures that the expansion joint cover in the floor-floor section is located centrally over the joint. The intersections may be left out if the joint is located in the column-wall vicinity **approximately 40 mm from the column/wall**. In this case, a floor-wall connection of the AAS sheet is only required at each corner.

- FP 130 NI
- FP 155 NI

FP 90/45 NI E 5

JOINT CONNECTIONS

The plugged connections enable convenient equal height transitions.

Example **FP 90/80 NI**

Example **FP 90/25 NI**

Example **FP 90/90 B NI**

ASSEMBLY SEQUENCE LONG AAS SHEET JOINT COVERS WITH THE EXAMPLE OF FP 90/45 NI LS

- 1 Cleaning and priming of the installation recess.

- 2 Application of a levelling layer with a pressure-resistant, shrinkage-free and waterproof mortar.

- 3 Cleaning, degreasing and priming of the aluminium brackets and height-adjusted levelling of the joint cover into the still fresh compensation layer (**upper edge of joint cover head is at the upper edge of the finished floor**).

- 4 After curing of the compensation layer, dowel the perforated positioning brackets on both sides (as far out as possible) with compound anchors or screw anchors (distance 350 mm).

- 5 Cutting of the spacers. Before mounting the centre seal and long AAS sheets, the round cords and plugs must be removed!

- 6 Press in the long AAS sheets and the middle seal and compress with the stainless steel cover caps and countersunk screws with nylon seals.

- 7 Embedding of the long AAS sheets into the on-site sealing using the sandwich method with polymer bitumen sealing sheeting and hot adhesive bitumen.

- 8 Production of a filling chamber with suitable filling material.

- 9 After approx. 14 days, retighten all fixing screws of the stainless steel cover caps with a torque wrench (7 NM).

ASSEMBLY SEQUENCE SHORT AAS SHEET JOINT COVERS

USING THE EXAMPLE OF THE FP 90/25 NI SS – VERSION WITH PU CONNECTION JOINT

- 1** Cleaning and priming of the installation recess.

- 2** Application of a levelling layer with a pressure-resistant, shrinkage-free and waterproof mortar.

- 3** Cleaning, degreasing and priming of the aluminium brackets and height-adjusted levelling of the joint cover into the still fresh compensation layer (**upper edge of joint cover head is at the upper edge of the finished floor and thus above the adjacent covering by the coating thickness**).

- 4** After curing of the compensation layer, dowel the perforated positioning brackets on both sides (as far out as possible) with compound anchors or screw anchors (distance 350 mm) and remove the spacers.

- 5** Filling and surface-flush removal of the installation recess with pressure-resistant, shrinkage-free and water-impermeable mortar. Attention: Observe the height difference of the coating!

- 6** Processing of the surface coating **up to outer edge and upper edge of the filling chamber joining profile**.

- 7** Dismantling of the filling chamber joining profiles. If required (e.g. if reworked with coating material), cut the filling chamber joining profiles free (not part of the general installation procedure).

- 8** Pressing in of the middle seal and the short AAS sheets and compression with the stainless steel cover caps and countersunk screws. Filling of the filling chamber on both sides with PU sealant (3-flank adhesion).

- 9** After approx. 14 days, retighten all fixing screws of the stainless steel cover caps with a torque wrench (7 NM).

ASSEMBLY SEQUENCE COATED AAS SHEET JOINT COVERS USING THE EXAMPLE OF THE FP 90/25 NI XA

- 1 Cleaning and priming of the installation recess.

- 2 Application of a levelling layer with a pressure-resistant and shrinkage-free mortar **in a water-impermeable mixture.**

- 3 Cleaning, degreasing and priming of the aluminium brackets and height-adjusted levelling of the joint cover into the still fresh compensation layer (**upper edge of joint cover head is at the upper edge of the finished floor**).

- 4 After curing of the compensation layer, dowel the perforated positioning brackets on both sides (as far out as possible) with compound anchors or screw anchors (distance 350 mm).

- 5 Cutting of the spacers. Before mounting the centre seal and coated AAS sheets, the round cords and plugs must be removed!

- 6 Press in the coated AAS sheets and the middle seal and compress with the stainless steel cover caps and countersunk screws with nylon seals. Incorporation of the coated sheets into the sealing in the sandwich.

- 7 Installation of the adjacent covering. A filling chamber on both sides with suitable sealant must be made between the covering and the joint cover.

- 8 After approx. 14 days, retighten all fixing screws of the stainless steel cover caps with a torque wrench (7 NM).

JOINT CONSTRUCTIONS APPLICATION EXAMPLES

FP 90/25 NI installation suggestion: MIGUTAN joint construction with short AAS sheets in conjunction with hard-aggregate floor screed or asphalt without area seal

FP 90/25 NI installation suggestion: MIGUTAN joint construction with short AAS sheet laid on raw concrete floor

FP 90/25 NI Installation suggestion: MIGUTAN joint construction with short AAS sheets placed on raw concrete ceiling with sealing surface protection system

JOINT CONSTRUCTIONS APPLICATION EXAMPLES

Installation suggestion: expansion joint combination FP 90/60 NI (long AAS sheets) with FP 90/25 NI (short AAS sheets)

Installation suggestion: MIGUTAN joint construction with long AAS sheets and factory applied cover plates for extremely wide construction joints

Installation suggestion: MIGUTAN joint construction with short AAS sheets and factory-bonded drag plates for very wide construction joints with the lowest possible construction heights.

JOINT CONSTRUCTIONS APPLICATION EXAMPLES

Installation suggestion: MIGUTAN joint construction with long AAS sheets used with over-construction

Installation suggestion: MIGUTAN joint construction with long AAS sheets as wall connection in special version

JOINT CONSTRUCTIONS APPLICATION EXAMPLES

Installation suggestion: MIGUTAN expansion joint constructions with high profile structure in combination with a Migupren FlamLINE joint sealing tape as a vapour barrier.

Installation suggestion: MIGUTAN joint construction in conjunction with long AAS sheets in conjunction with insulated structures

JOINT CONSTRUCTIONS APPLICATION EXAMPLES

Installation suggestion: MIGUTAN joint construction with long AAS sheets for extremely large construction heights with pressure distribution plate

Installation suggestion: MIGUTAN joint construction with long AAS sheets for large construction heights

JOINT CONSTRUCTIONS APPLICATION EXAMPLES

Installation suggestion: MIGUTAN joint construction in conjunction with short AAS sheets in conjunction with additive floors

JOINT CONSTRUCTIONS APPLICATION EXAMPLES WITH COVER PLATE

All installation proposals presented below must be checked and determined individually for each case according to the respective structural conditions. We have dispensed with the presentation of the functional layers; they must be carried out in accordance with the rules of technology.

All coatings shown below relate to the surface protection system OS 11 or OS 13 according to the guideline "Protection and Repair of Concrete Components" of 1990 and in the version of 2001. When using the previous system OS 3 (simple sealing), please consult our sales service centre first.

FP 90/45 NI AP 800

Stainless steel cover plate AP 800 in conjunction with the expansion joint covers from the range FP(G) 90. When using the cover plates, no accommodation for settlement is possible.

FP 110/60 NI APG 110/3

Smooth stainless steel cover plate APG in conjunction with the expansion joints from the range FP(G) 80 NI, FP(G) 90 NI, FP(G) 110 NI, FP 130 NI and FP 155 NI. When using the cover plates, no accommodation for settlement is possible.

JOINT CONSTRUCTIONS APPLICATION EXAMPLES

Example: FPG 90/25 Ni with toothed APS cover plate APS

Example: FPG 90/35 Ni with APS cover plate

Installation suggestion: Expansion joint combinations FP .../25 NI (short AAS sheets) with FP .../45 NI (long AAS sheets) with APG cover plate for wide joints

SYSTEM FP 90

EXAMPLES

PRACTICAL APPLICATIONS

Airport Nuremberg, Germany – FP 90; FP 115

Airport Cologne, Germany – FP 90

Parking deck shopping mall Dresden, Germany

Parking garage Berlin, Germany Berlin, Beusselstraße

Refurbishment pedestrian bridge, Eilenburg, Germany

Parking garage Annaberg, Germany – FP 90

Airport Berlin Brandenburg, Germany – FP 90 BNI

Parking garage Weiterstadt, Germany – FP 90
